VidaBox Releases New TouchClient12™, an Affordable In-wall Flush-mount Touch Panel Computer running XP Embedded

WESTBURY, NY – May 15th – VidaBox LLC is excited to announce the new TouchClient12™ in-wall touch panel computer. Featuring a 12.1” color touchscreen and XP embedded computer, it is selling at an affordable retail price of \$2499.

“The TouchClient12™ is the flush-mount touch panel computer solution that integrators have been asking for,” comments Steven Cheung, President of the company. “The only connections needed are 12V low voltage power and a network connection with CAT5 cable! Once installed, integrators can point its internet browser to web-controllable resources like CasaTunes, or install any program that runs on XP embedded, such as control or automation software, and run it right from the touch panel! With its built-in dual RS-232 and dual USB ports, this opens up the possibility of local automation and control being run directly from the TouchClient12™!”

Other unique features on the TouchClient12™ include a native 1024x768 resolution screen and dual stereo speakers for local audio playback. It also comes with its own rough-in box that the primary screen assembly mounts to magnetically.

“With a magnetic mount design,” Cheung elaborates, “integrators can pop the screen assembly into an installed rough-in box in seconds, and not waste valuable time turning screws to access the back panel after the initial install. This is especially important for installers looking to use TouchClient12’s RS-232 and USB ports for control & automation.”

Cheung continues, “Not only is the TouchClient12™ easy to install, but it’s also extremely durable and reliable. With no moving parts like noisy fans or hard drives that may fail over time, it also features a write-protected solid state drive, so you can expect to install and leave it running for years.”

Enabled by default, write-protection allows the panel to be foolproof against viruses, spyware, malware, or other misuse. A quick restart will restore the panel to its original condition. Write protection can be disabled by installers and integrators looking to add additional software or tweak the panel’s configuration, and then it can be re-enabled before final use.

For more details and specifications on the VidaBox TouchClient12™ and their comprehensive line of media servers and extenders, please visit the company website at <http://www.vidabox.com>, or attend one of their free monthly dealer trainings to see it live and in person!
