PRESS RELEASE

EMBARGO: November 5th, 2008

Contact: Steven W. Cheung, 516-730-7500 x4201

New "headless" VidaBox RackServer™ provides massive, fool-proof storage for Blu-rays, DVDs, and music with up to 16.0TB in storage

Westbury, NY – November 5th – VidaBox is excited to release the new RackServer™ - a 4U tall, 20" deep system that provides massive, expandable, RAID5-protected storage of movies, music, photos, and more. Unlike other RACK series servers, the new RackServer is based on Windows Home Server, and is designed to operate headlessly with no keyboard or monitor, protecting it from software corruption caused by viruses, spyware, and other malware.

"We're proud to finally offer the hardened server that dealers have been asking for," exclaims Steven Cheung, President of VidaBox LLC. "The RackServer™ is a great choice that balances a more affordable price point when compared to our current RACK servers, while providing the same reliable, expandable storage they offer. However, it also hosts a whole new set of unique features, such as the new '1-step, disc drop' archiving, built-in media access from the internet, and automated VidaBox extender backups."

The new '1-step archiving' feature allows anyone to simply insert an unencrypted CD, DVD, or Blu-ray disc into the system, and it will start automatically archiving the disc, along with the full cover, album art, and other title details. There is no interface or remote to learn, making it extremely easy to use. Once the process is completed, the disc is automatically ejected. In conjunction with up to 2 VidaBox RoomDisc Drive Extenders, a single RackServer can copy up to 5 music or movie discs at once.

"Most media servers and extenders have a menu-driven, 3 or more step archiving process," continues Cheung. "By building in a simple 1-step process into the RackServer™, it's easier than ever to back up your entire collection. Best of all, anything stored on the system is directly accessible across the internet via its built-in webserver. Combined with its RAID5 protection and 24/7 array monitoring, it completes a truly reliable, easy-to-use media server solution."

RackServer systems start with 2.0TB of storage, and are upgradable to 7.0TB in a single chassis. It also sports an expansion option to connect up to an additional RackServer+Plus expansion unit to store up to 16.0TB in a single volume. These systems come with the top-of-the-line Barracuda® ES.2 drives from Seagate Technology, which are specifically designed for high-capacity enterprise storage & mission-critical applications.

"Seagate® Barracuda® ES.2 hard drives are field-proven storage solutions that deliver high-capacity, solid performance, unmatched reliability, as well as the option of choosing a SATA or SAS interface – unique to this class of drive," said Henry Fabian, Executive Director of Core Product Marketing at Seagate Technology LLC. "We are pleased to support VidaBox and their choice of integrating the Barracuda ES.2 within the RackServer system, which will deliver a wealth of storage benefits to VidaBox customers."

The RackServer is available now, and comes with an anytime upgrade option for the RackServer+Plus expansion unit. For more details and specifications on the RackServer™ and VidaBox's comprehensive line of media servers, extenders, and complete entertainment and control solutions, please visit the company website at <http://www.vidabox.com>, or see them at International CES in the North Tower Suite H22-121!
