PRESS RELEASE

EMBARGO: September 10th, 2009

Contact: Steven W. Cheung, 516-730-7500 x4201

VidaBox TouchClient™ e-Series In-wall PC Touch Panels Drives Full Motion Video & Empowers Reliability at an Affordable Price

Atlanta, GA – CEDIA Expo 2009 – September 10th – Booth 6451 – VidaBox, LLC presents the new TouchClient™ e-Series in-wall touch panels. Powered by XP embedded, these powerful 2nd generation models are capable of supporting full motion video (FMV) playback for graphics-rich interfaces. Complete with a solid-state, “no moving parts” design and a myriad of hidden connectivity options, these panels are designed for professional integrators seeking a cost effective, reliable, in-wall touch screen PC capable of running powerful whole house control or automation software.

“Automation and control software packages are getting more powerful everyday, but most in-wall panels currently offered are either too weak to run graphics-intensive programs smoothly, or are too expensive with respect to the features they provide,” explains Steven Cheung, President of VidaBox LLC. “The e-Series is the perfect balance between these two extremes. Integrators now have a choice that delivers the video processing power needed in a clean, easy-to-install, in-wall flush-mount package – all at a tremendous cost savings compared to similar solutions.”

TouchClient™ e-Series panels are available in 8.4” and 12.1” screen sizes with the TouchClient8e and TouchClient12e, respectively. They are fully customizable with a wide range of options, such as compact flash-based or solid state storage for reliable, long term performance. They have also been fully tested for compatibility with many software packages, such as Exceptional Innovation’s Life|Ware™, Cortexa™, Autonomic Home’s Mirage™, CasaTunes®, and more. Solidifying the TouchClients’ stability is their built-in write protection software, which shields the operating system from any unauthorized changes, making it impervious to viruses, spyware, and other malware. Combining that with built-in wireless, dual RS-232, dual USB, and dual Ethernet, the TouchClient™ panels are suitable for a wide variety of integrator projects.

“With the new e-Series TouchClients™, integrators are no longer stuck with expensive, proprietary hardware or low-margin, branded solutions as their only two choices,” Cheung continues. “Our panels can be private labeled and shipped free of any logos or markings. Upon request, we can even embed an integrator’s logo into the panel’s start up sequence for a complete, customized look. With write-protection, FMV support, and reliable solid state performance, it’s clear why the new TouchClient™ e-Series is the best choice in many applications. No other touch panel offers these many features in a flush-mount, in-wall design at this price.”

The VidaBox TouchClient™ e-Series is available & shipping now, and is being showcased in Booth 6451 at the CEDIA Expo. For more details and information on the TouchClient™ & other VidaBox media centers, audio servers, touchscreens, or other entertainment and control solutions, please visit the company website at <http://www.vidabox.com>, or call 516-730-7500.
